

## CanDeal **evolution** Technology Highlights

The new CanDeal **evolution** platform will require a few technology changes to support a new, improved experience for Canadian buyside participants. Outlined below are high level details of what will be required. Please use this as a guide and contact Adam Gingras (contact details below) for further assistance.

### Minimum Browser Requirements

Chrome	Versions 40+
Microsoft Edge	Versions 12+
Firefox	Versions 38+
Safari	Versions 9+
Internet Explorer	Version 11

### Logical Data Flow

Data flows both ways on every network connection between client and CanDeal. Connections are always initiated by the client.

### Authentication

All access through the CanDeal application requires a username/password. Client user IDs are tied to their respective IP addresses (or IP address ranges). Clients can only log in from their registered IP addresses.

### Proxy Servers

If your organization has proxy servers or content filtering/inspecting appliances, the following URL/IPs must be bypassed on your proxy server:

Production: <https://evolution.candeal.com> (149.97.157.36, 149.97.149.164)

Pre-Production: <https://evolution-preprod.candeal.com> (149.97.149.163)

UAT: <https://evolution-uat.candeal.com> (149.97.157.35)
